

Bowed Harp features samples from an autoharp played with a pick and an EBow. The autoharp is a string instrument similar to a zither. The EBow is a battery-powered electronic device for playing string instruments (like an electric guitar), producing a sound reminiscent of using a bow on the strings. Bowed Harp lets you mix these two sources to create unique plucked and pad sounds. Both sources also feature a selection of 12 impulse responses (4 reverbs, 4 cabinets, 4 effects) to further mangle the sounds.

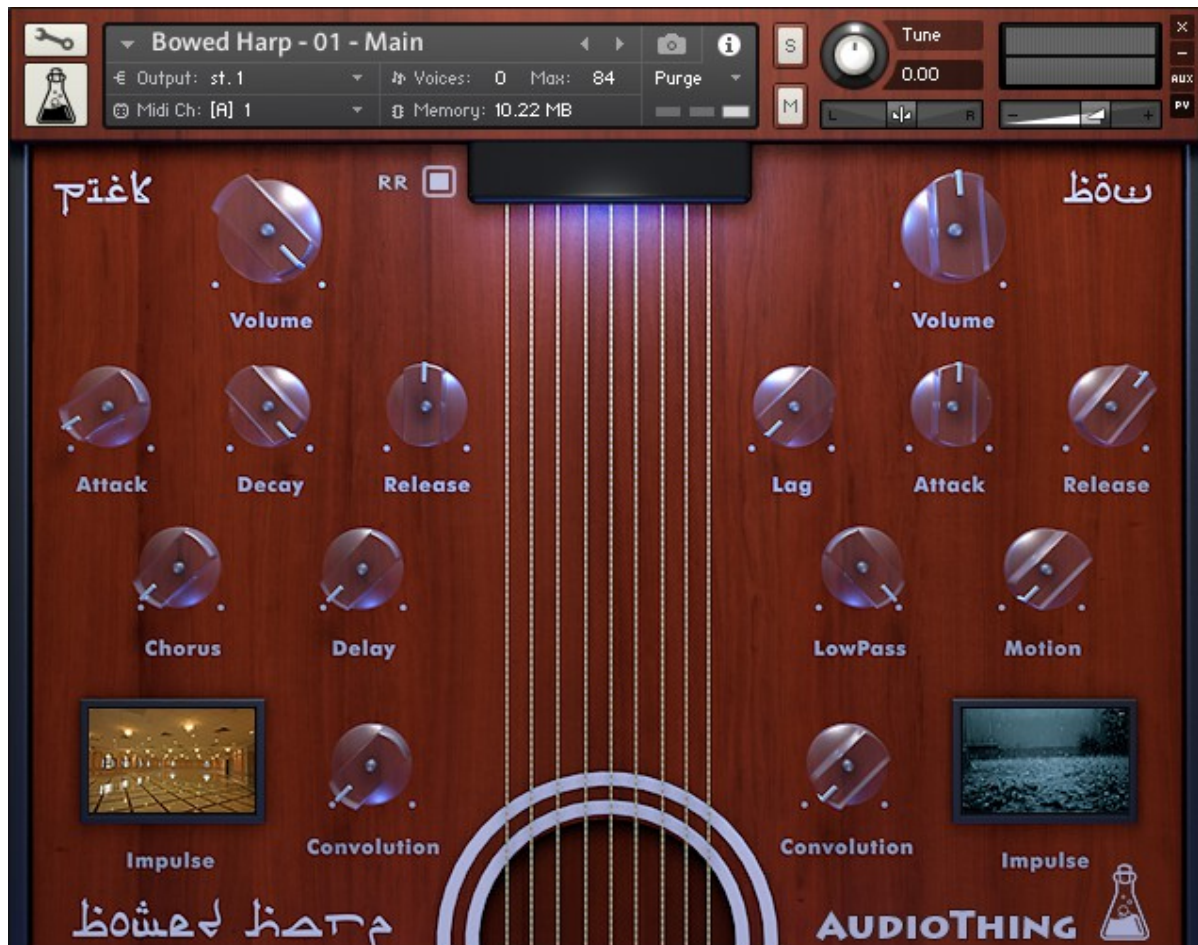

Specifications

- 14 Kontakt Instruments (.nki)
- 5 Round Robin samples
- Up to 3 Velocity Layers
- 160 Samples (48kHz / 24Bit)
- Formats: Kontakt and WAV

Installation

Once the *AudioThing_Bowed_Harp.rar* file is downloaded, unzip it using WinRar or UnRarX or a similar type of software. It is recommended that you preserve the internal folder structure, but you can also place the instruments and samples into separate folders. Kontakt will ask for the new path the first time you run the instrument. Kontakt 5 or higher is required to run the instrument. For a limited period of time, Kontakt Player will run a limited demo version of this library.

GUI

License

The license of this product is granted only to a single user for how many computers he/she has. All sounds and samples in this product are licensed, but not sold, to you by AudioThing for commercial and non-commercial use in music, sound-effect, audio/video post-production, performance, broadcast or similar content creation and production.

This license expressly forbids any unauthorized use of the content of this library or any AudioThing library by another sample instrument or loop, samples or SFX library of any kind, without our express written consent.

Thank You

Thank you for buying Bowed Harp! We hope you will have as much fun using this product as we had making it.
