Pipes

About

Pipes is a collection of instruments derived from a variety of cardboard tubes, aluminum spray cans, dreamcatchers, and PVC pipes. Even if the pitch of most of the sources is not stable, almost each instrument is tuned and playable with the keyboard. Each instrument features from 3 to 5 Round Robin samples and up to 3 velocity layers (usually cross-faded). One of the main instruments is a sampled Wah Wah Tube (aka Vibratone): bell-like sound with a very long release and a dedicated control for overtones. There are a couple of sound-designed patches derived from the original instruments along with Kontakt Multis ready to play.

Installation

Once *AudioThing_Pipes.rar* is downloaded, you need to unzip it using a software like WinRar or UnRarX. It is better to preserve the internal folder structure, however, it is possible to place instruments and samples to separate folders/harddisks but Kontakt will ask for the new path first time you run the instrument. Kontakt 3.5 is needed, Kontakt Player will run a demo version of this library for a limited time (and with limited functions).
