

Soundscapes, textures and ambiences ready to use as Kontakt instruments or WAV loops. These sounds are divided in four categories: binaural, concrete, inductor and piezo. As our previous version Soundscapes Vol.1, the samples were recorded in different places across the world (Las Vegas, Dublin, Prague, Naples, and Cosenza) using studio or portable equipment. We used different kind of microphones, including handmade piezo and inductor mics, a large condenser microphone and a binaural microphone set. Everything was then processed and boxed inside a Kontakt instrument with a custom GUI. The pitch bend is assigned to a ± 24 pitch transpose for glitch effects. All samples are perfect loops, so if you don't have Kontakt you can load them directly into your DAW.

Specifications

- 35 Kontakt Instruments (.nki)
- 35 Samples (48kHz / 24Bit)
- Formats: Kontakt and WAV
- Samples derived from:
binaural recordings, inductor and piezo effects, mixed objects/places.

Installation

Once the *AudioThing_Soundscapes_Vol.2.rar* file is downloaded, unzip it using WinRar or UnRarX or a similar type of software. It is recommended that you preserve the internal folder structure, but you can also place the instruments and samples into separate folders. Kontakt will ask for the new path the first time you run the instrument. Kontakt 4 or higher is required to run the instrument. For a limited period of time, Kontakt Player will run a limited demo version of this library.
