Tank Drum features samples from a famous steel tongue drum. Also called hank drums, these instruments are usually made out of propane tanks with tongues of different sizes. The instrument we sampled features 8 tongues and it's tuned in E minor pentatonic. It was played both with hands and rubber mallets along with some sound effects with hands and brushes. The sound is rich in harmonics with a long release.

Specifications
- 7 Kontakt Instruments (.nki)
- 5 Round Robin samples
- 3 Velocity Layers
- 7 Custom Impulse Responses
- 274 Samples (44.1kHz / 24Bit)
- Formats: Kontakt and WAV

Installation
Once the *AudioThing_TankDrum.rar* file is downloaded, unzip it using WinRar or UnRarX or a similar type of software. It is recommended that you preserve the internal folder structure, but you can also place the instruments and samples into separate folders. Kontakt will ask for the new path the first time you run the instrument. Kontakt 4 or higher is required to run the instrument. For a limited period of time, Kontakt Player will run a limited demo version of this library.

If available, the RR button will enable or disable the round robin samples.

The EQ section features 4 fixed bands (Low, Mid Low, Mid Hi, High).

The Reverb section features 7 custom made impulse respones. When the Wet knob is all the way down, the reverb is disabled.

The Envelope section lets you alter the sound changing the Attack, Decay and Release components.
