THINGS – FLIP EQ

Things Flip EQ is an easy to use tilting EQ plugin with mid/side mode. Turn the main knob to the right, and you get more highs and less lows; turn it to the left, and lows are boosted while highs are attenuated. You can also choose to cut or boost only.

You can choose the cutoff frequency of the EQ with the Cutoff control, or increase the gain of the EQ with the Boost button.

Flip EQ can also be applied to either the mid or side of a stereo signal to further enhance the stereo depth.

INSTALLATION

MAC OS

- Double click on the DMG archive to extract it
- Right click on the PKG installer and click open
- Follow the instructions to install the plug-in(s)

WINDOWS

- Extract the ZIP archive
- Double click on the setup file (*.exe*)
- Follow the instructions to install the plug-in(s)

REGISTRATION

You can open the registration window by clicking on the icon ≡ next to the bypass button, in the top-right corner.

You can choose between *Online* and *Offline* authorization.

ONLINE

- If you haven't created an account yet, you can signup here using the same email address used at check out.
- Just input your credentials into the text fields and click on Log In

OFFLINE

- Download the license file from your account.
- Copy the file to your offline computer.
- Just drag and drop the license into the registration window or click on the *Load License File* button and browse to the downloaded license.

PARAMETERS

MAIN

Flip	Controls the gain of the EQ
Mode	Selects where to apply the EQ (mix, mid, side)
Type	Selects the type of EQ to use (mix, cut, boost)
Cutoff	Controls the frequency cutoff of the tilt EQ
Soft Clip	Enables/disables a soft clip to tame the boost from the tilt EQ
Boost	Doubles the gain of the tilt EQ
Highpass	Controls the cutoff of an optional HighPass filter
Lowpass	Controls the cutoff of an optional LowPass filter

MID / SIDE

WHAT IS MID / SIDE?

In a stereo signal, the Mid channel is considered the center, and contains both Left and Right channels. Boosting the Mid channel results in a more mono sound.

The Side channel instead contains the difference between the Left and Right channels. Boosting the Side channel results in a more spacious or wider sound.

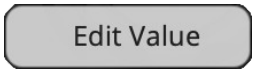
MID / SIDE MODE

Flip EQ can be applied to the mid or side part of the signal. This can be useful to create a wider stereo image on a full mix or individual tracks.

FEATURES

EDIT VALUE

You can manually change the value for knobs and sliders.
Right click on a parameter and choose *Edit Value.*
You can also access this feature with a SHIFT + Click.



By clicking on the ☰ icon you can access additional features.

WINDOW SIZE

You can resize the plugin window using three predefined sizes (*small, standard, big*). You can also resize the plugin window by clicking and dragging the bottom-right corner of the interface. Double clicking will reset to the *standard* size.

PRESET COPY/PASTE

You can easily share presets by using this Copy/Paste feature.

Copy to Clipboard	the status of all parameters will be saved to the Clipboard
Paste from Clipboard	load a preset from the Clipboard

ENABLE/DISABLE NOTIFICATIONS

You can enable or disable the notifications for updates and news (shown by the bell icon). This option is *global* and it will affect all AudioThing plugins.

SWAP MOUSE BUTTONS

If you are using the right button as your primary mouse button, the plugin might not recognize it. Use this option to enable it internally in the plugin. This option is *global* and it will affect all AudioThing plugins.

GUI ACCELERATION

You can enable or disable the GUI acceleration supported by your system. The current and default library is OpenGL.

END

WHERE IS EVERYTHING?

The installer will place the plugins, presets and other data in these folders.
