AudioThing - Jumpstart

About

Jumpstart is a collection of patches programmed over three years of live gigs and studio sessions for the Novation Xio (formerly XioSynth). There are four self-explained categories: Leads, Keys, Synth and Basses. Many patches where programmed with live needs such as differents volume levels, EQ and the most important thing every player should do: tweaking controls. The patches sound way better using the modulation and the XY pad of the Xio, the synthesizer becomes alive rather than, as sadly often happens, something static and cold. This product includes all single patches and the whole bank in SysEx format.

- 30 Patches
- 4 Categories
- Single patches and bank

Installation

Once *AudioThing_Xio_Jumpstart.zip* is downloaded, you need to unzip it using a software like WinRar or UnRarX. Then you will need the [Xio Template Editor](#) (or just any SysEx software) to upload the patches to the Xio.
